

JEFF MCDANIEL SEE
ARCHITECTURE PORTFOLIO

Displaying an affinity for arts and engineering from an early age, Arch. Jeff went on to pursue Architecture after his schooling at Hope Christian High School. 5 years later, he graduated Cum Laude from University of Santo Tomas with a Bachelor's Degree in Architecture in 2014 and joined Jonathan O. Gan & Associates, one of BCI Asia's Top 10 design firms in the country, as an apprentice. There, he was trained in designing and detailing various architectural typologies, ranging from simple to complex projects and involving close collaboration with engineers, planners, interior designers and other consultants. Some of the projects that he was in charged with or co-spearheaded include mid-rise & high-rise apartments, hotels, commercial developments, land development projects, educational facilities, gymnasiums, storage facilities and residences.

After honing his design acumen and completing his two-year mandatory diversified architectural experience, Arch. See became eligible to take the professional licensure examinations in order to become a licensed professional. He took the exams in June 2016 and was able to garner the First place spot among all the examinees.

In 2018, he resigned from his senior position at Jonathan O. Gan & Associates to begin his own private practice.

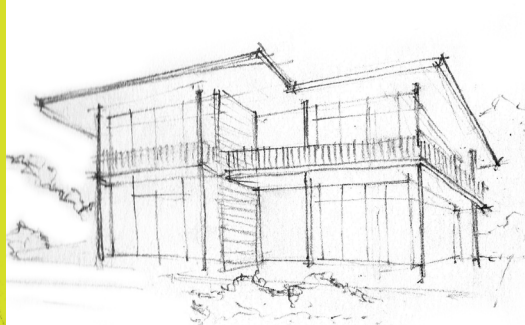

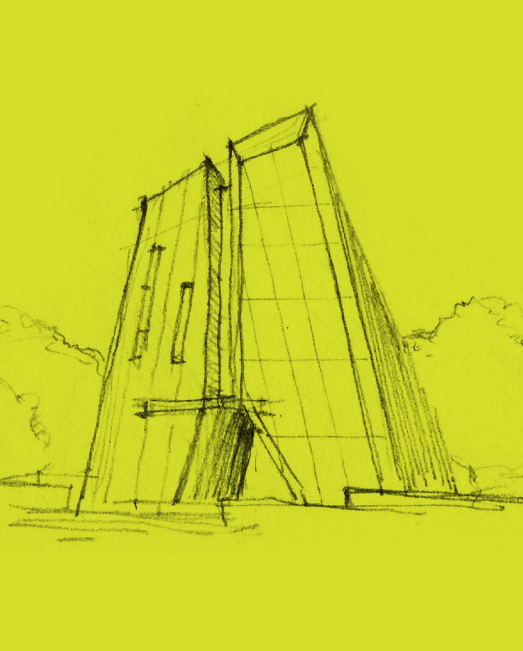

"Architecture is my passion and calling. I believe architecture not only as a means to create beautiful dwellings but also as a form of advocacy. Architects can shape buildings & landscapes and in turn, these buildings & landscapes can shape us. We live in a very critical time period where human advancement has become excessively detrimental to the environment. As professionals in the building sector, it is our responsibility to address this issue through sustainable practices and advocate for better building. Architecture, as it is historically in the past and forever onwards to the future, should be functional, sustainable and beautiful. If either one is missing, it cannot be called Architecture anymore. A building can be functional and beautiful but could ruin the environment by its own virtue of existing. Or it could be functional and sustainable but not inspire with its lack of creative beauty. A building with all three traits can inspire and uplift and that should be the main goal of architecture."

Professional Membership Status

Regular Member of the United Architects of the Philippines , IAPOA
Registered and Licensed Architect - PRC no. 38096
(2016 Architecture Licensure Examination board 1st placer)

and others.....

THE ARCHITECTURAL PROCESS

Architecture is a process. Starting with the client's brief, a concept inspired by it and the context is born out of the architect's psyche. Sketches & mock-ups are the architect's tangible tools to convey the solution but the architect may choose to employ much more ingenious ways to deliver his work.

These are further developed and enhanced with the client's inputs and the architect's direction until the desired outcome is achieved.

SELECT CONCEPTUAL PROJECTS

Majority of an architect's designs will remain on the drawing boards for different reasons, either becoming the inspirations for the next work or design anchors in his creative career. However, all of them have significance.

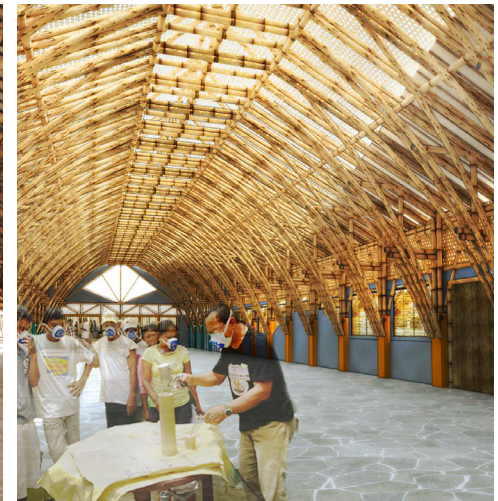

Philippine school 2040

A competition for the Philippine public school of the future.

Comunidad de Bambu

Pilot senior high school prototype and community cooperative project geared towards bamboo cultivation and development.
